Python Programming - 2301CS404

Lab - 13

Roll No.: 459

Name: Vibhu Shihora

01) WAP to create Calculator module which defines functions like add, sub,mul and div.

Create another .py file that uses the functions available in Calculator module.

In [2]:
```
import calc

print("add : " ,  calc.add(10 , 20) )
print("sub : " , calc.sub(10 , 20) )
print("div : " , calc.div(10 , 20) )
print("mul : " , calc.mul(10 , 20) )
```

```
add :  30
sub :  -10
div :  0.5
mul :  200
```

02) WAP to pick a random character from a given String.

In [5]:
```
import random

s = "helloGoodMorning"

print( random.choice( list(s) ))

# or

print( s[ random.randint(0 , len(s)-1 ) ] )
```

```
o
o
```

03) WAP to pick a random element from a given list.

In [15]:
```
import random

li = [1,5,7,9,0]

print( random.choice( li ))
```

7

04) WAP to roll a dice in such a way that every time you get the same number.

In [21]:
```
import random

dice = list(range(1,7) )

random.seed(5)

print( random.choice(dice) )
```

6

05) WAP to generate 3 random integers between 100 and 999 which is divisible by 5.

In [12]:
```
import random

count = 0

while count != 3:

    n = random.randint(100,999)

    if(n % 5 == 0):
        print(n)
        count += 1
```

```
480
525
395
```

06) WAP to generate 100 random lottery tickets and pick two lucky tickets from it and announce them as Winner and Runner up respectively.

In [3]:
```
import random

tickets = []

for i in range(100):

    n = random.randint(1000,9999)

    tickets.append(n)
```

```python
winner , runnerUp = random.sample(tickets,2)

# print(tickets)
print("Winner : " , winner)
print("runnerUp : " , runnerUp)
```

```
Winner :  8238
runnerUp :  7737
```

07) WAP to print current date and time in Python.

In [ ]:
```python
import datetime

print("Date And Time : ", datetime.datetime.now())

# seprate

print("Date : " ,datetime.datetime.now().date())
print("Time : " ,datetime.datetime.now().time())
```

```
Date And Time :  2026-03-04 11:49:49.675629
Date :  2026-03-04
Time :  11:49:49.676032
```

08) Subtract a week (7 days) from a given date in Python.

In [17]:
```python
from datetime import datetime , timedelta

date = datetime(2026, 3, 10)

# print(date)

newDate = date - timedelta(days=7)

print("Original Date:", date.date())
print("Date after subtracting 7 days:", newDate.date())
```

```
Original Date: 2026-03-10
Date after subtracting 7 days: 2026-03-03
```

09) WAP to Calculate number of days between two given dates.

In [24]:
```python
from datetime import datetime , timedelta

d1 = datetime(2026,3,10)
d2 = datetime(2026,3,20)

diff = d2 - d1

print(diff.days)
```

```
10
```

10) WAP to Find the day of the week of a given date.(i.e. wether it is sunday/monday/tuesday/etc.)

In [11]:

```python
import datetime

dt = datetime.datetime.now().date()     # Its Means Current Date
day = dt.strftime("%A")

print("Day of the week:", day)
```

```
Day of the week: Wednesday
```
